ARCHITECTURAL
KNOWLEDGE

Fraunhofer
AUSTRIA

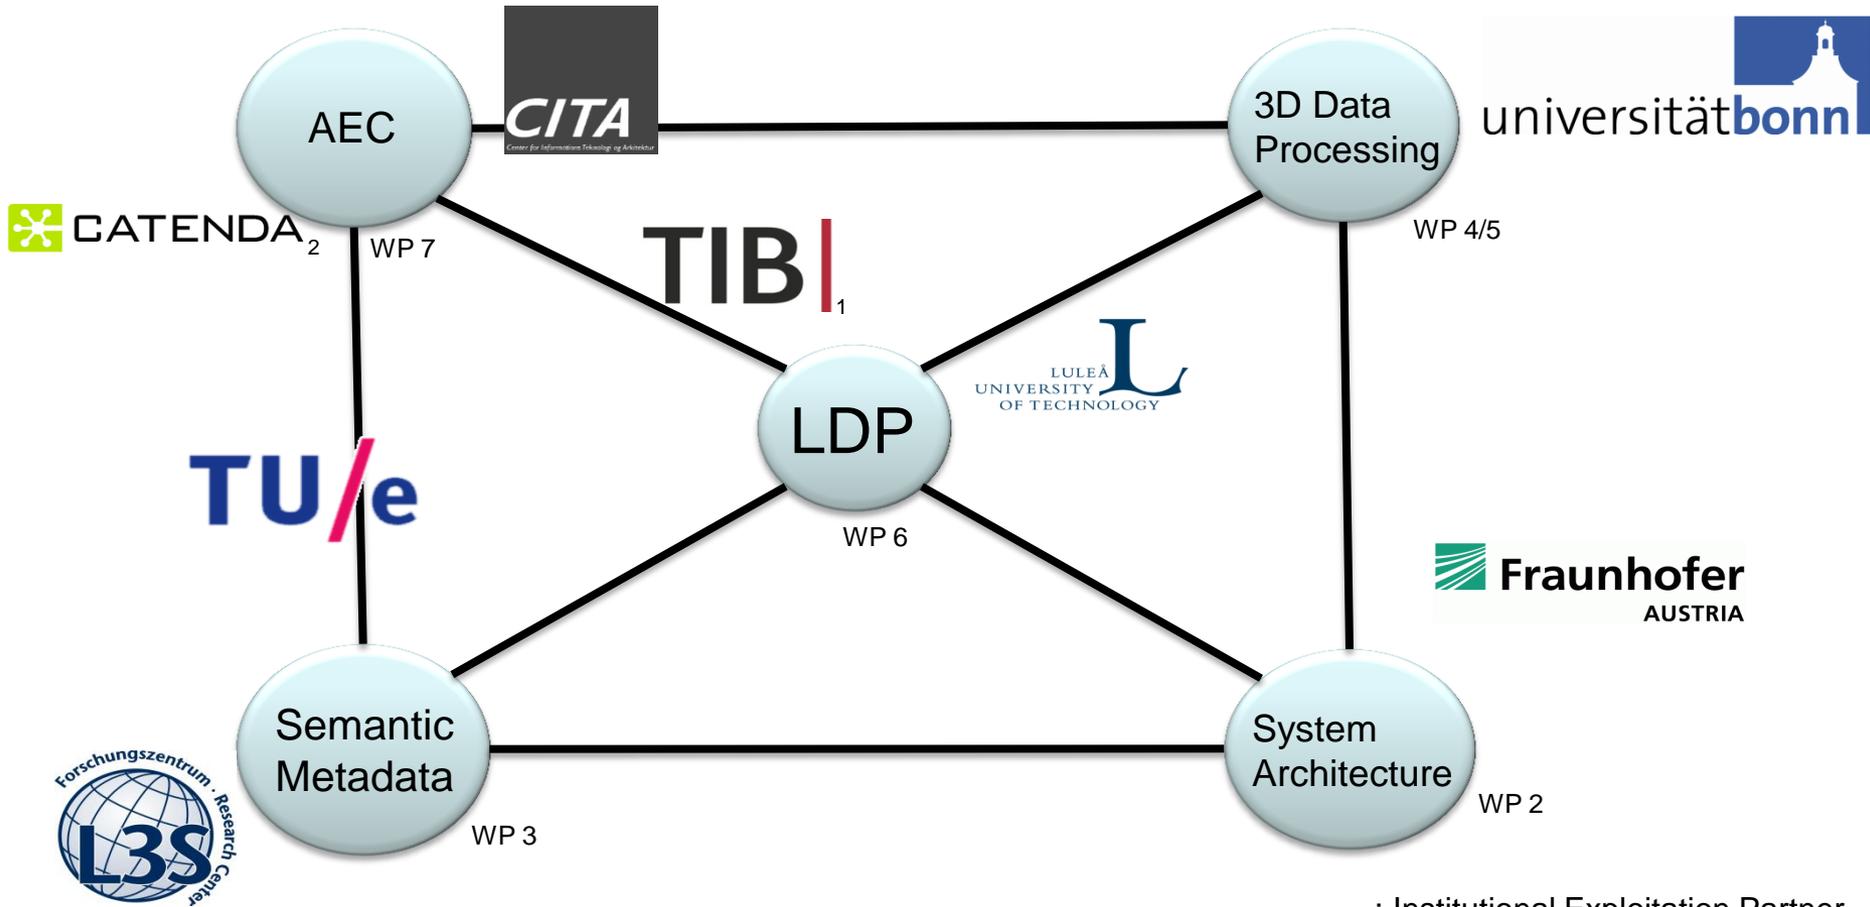

- **Introduction**
- **Challenges**
- **Approach**

- Three year research project, EU-funded
- Development of a secure and efficient long-term archival process for 3D architectural data
- Focus on combination of unstructured data from point clouds from laser scans and highly structured data from Building-Information-Modelling (BIM) files
- Develops strategies to search and detect architecturally meaningful information regarding semantic

DURAARK Consortium

- 1: Institutional Exploitation Partner
- 2: SME Exploitation Partner

Long History of Architecture, Construction and Engineering

- Starting with Neolithic Revolution at latest

Problem ever since

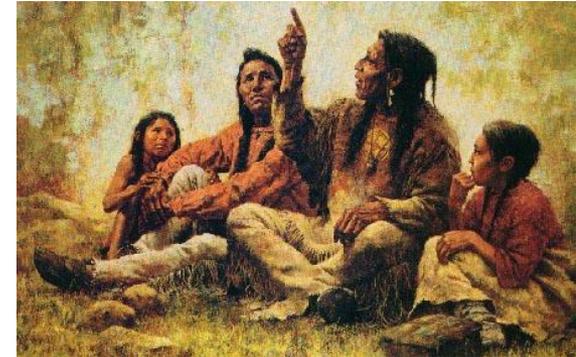

- Passing knowledge about constructions from one generation to the next

Early Times of Architecture

- **Mainly oral tradition**

Storage device for construction manuals: Human brain

- + Easy rendering - requires only language-compatible speaker and listener, imagination / abstraction
- + Easy integration of changes
- Construction complexity strongly limited
- Prone to error / „bit rot“
- Limited life-span of storage device (< 100 years)

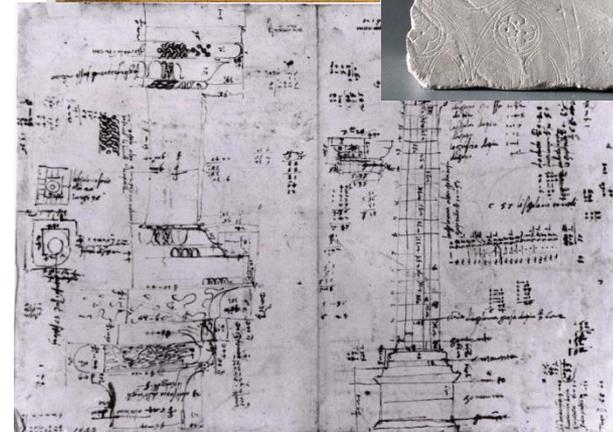

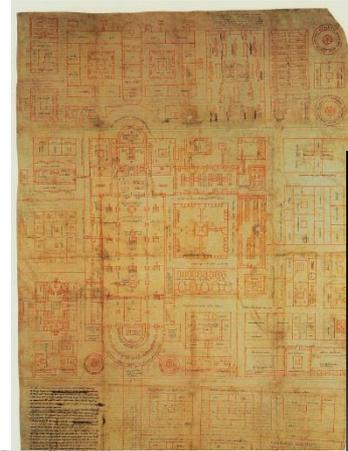

Increasing Complexity of Constructions

- Manual 2D drawing

Storage devices: Stone, clay, leather, papyrus, paper etc.

- + Allows increased construction complexity, arbitrary details
- + Medium to long life-span
- Still relative easy rendering: Eyes, loupe, imagination / abstraction, reading / mathematical skills
- Integration of changes is hard

DURAARK
DURABLE
ARCHITECTURAL
KNOWLEDGE

Fraunhofer
AUSTRIA

Alternative: Haptic Models

- 3D scale models

Storage devices: Stone, wood, clay

- + Depending on material, medium to long life-span
- + Most easy rendering
- Depending on material, integration of changes is hard
- Limited complexity / details due to size and occlusion

Game Changer No. 2: 3D Object Acquisition

BIM

- *prescriptive* CAD
- shaping the future

3D Object acquisition:

- *descriptive* CAD
- documenting the current state
- preparing retro-fit / renovation

Tremendous progress in the last 10-15 years:

- Various methods: Laserscanning, photometric stereo, multiview reconstruction, structured light
- Fast
- Accurate
- Cheap... well, kind of like...

DURAARK
DURABLE
ARCHITECTURAL
KNOWLEDGE

Today: 7D CAD and BIM

Building Information Modeling (BIM): Covering the complete lifecycle of a building

- design drafts
- design development
- construction documentation
- production
- documentation of the current condition
- building operation

3D CAD

- Geometry along X-Y-Z axes

4D CAD

- Schedule time

5D CAD

- Cost-related information

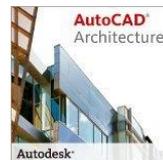

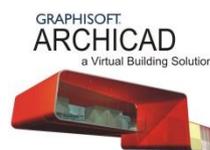

6D CAD

- Energy and sustainability

7D CAD

- Facility management

DURAARK

KNOWLEDGE

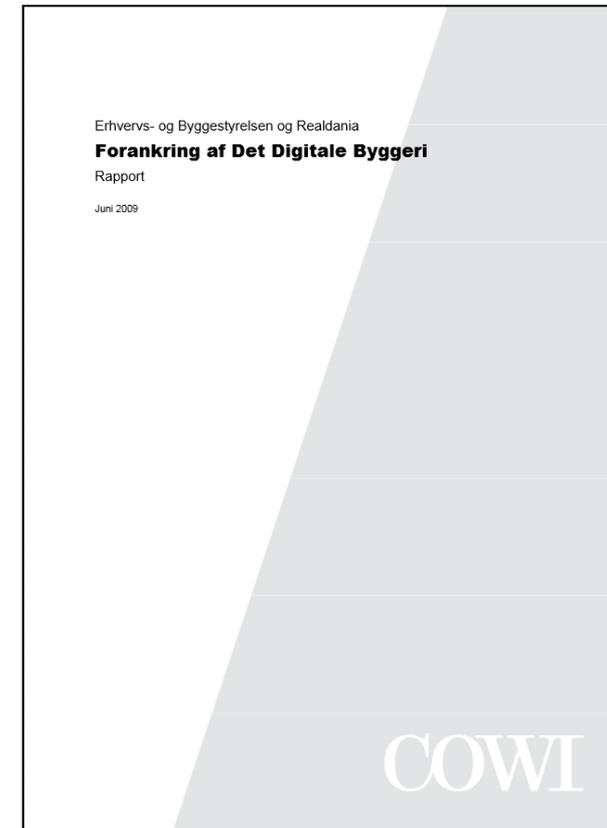

DENMARK

SINCE 2007: BIM DEMANDED FOR PUBLIC BUILDINGS

- State >2,5 mio Euro => BIM
- Municipalities >0,7 mio Euro => BIM

- Competition phase demands 3D model (IFC)
- Digital exchange of information via project web
- Quantity take-off from IFC model
- Digital handover of facility management information

UNITED KINGDOM FROM 2016:

“...The UK Government has mandated that all public projects in the UK will be delivered using BIM by 2016. This is driving the private sector to adopt Building Information Modelling processes, which is now becoming a common requirement for all major projects....”

Internal Infrastructure: bimsync at catenda for web access of IFC

The screenshot displays the bimsync web interface. On the left, a tree view lists building elements, with 'Slab 1.6' selected. The central 3D view shows a cutaway of a multi-story building with a green roof and internal structural elements. On the right, a detailed property table for 'Slab.1.6 Floor:429 Taghave intensiv p-anlæg 750mm:1063822' is shown.

Identification	
Identity Data	Construction Graphics Identity Data
Phasing	Structural Constraints Dimensions

Approach

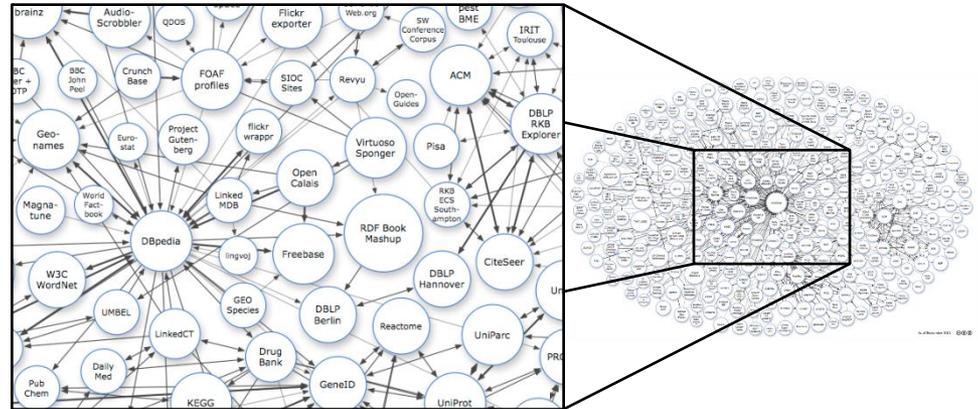

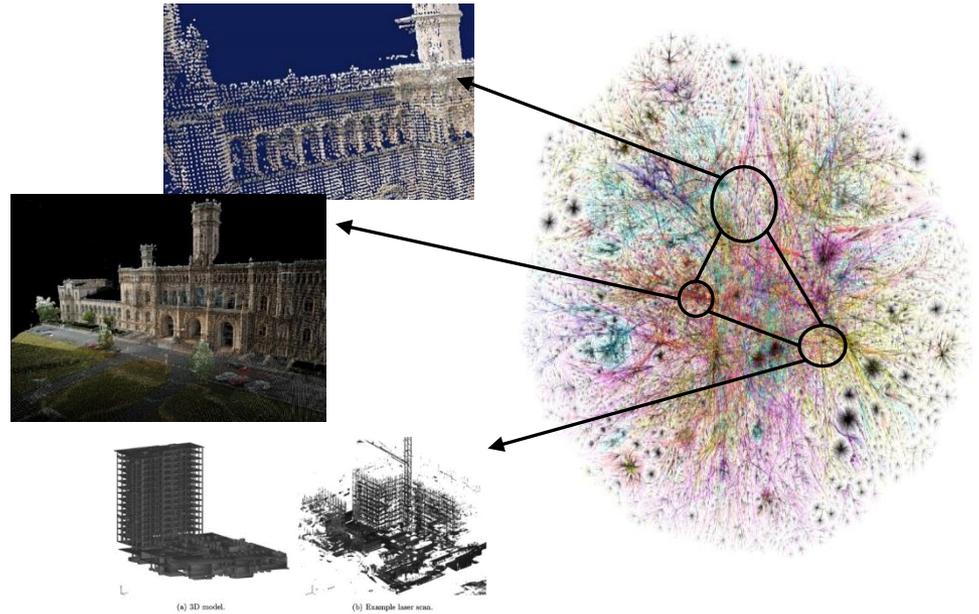

DURAARK
DURABLE
ARCHITECTURAL
KNOWLEDGE

Fraunhofer
AUSTRIA

Challenges

- **Non-existent semantic relations** between architectural representations in BIM model, point clouds and geo-referenced data from web and images
- **Heterogeneous and inconsistent metadata schemes and ontologies** for the description of building elements and their properties in BIM models
- **No automated systems to detect and search for architectural structures in point clouds**
- **Fast changing development of architectural software, files and referenced web-based data** prohibits successful and easy long-term archival for companies and institutions

Challenges (1/2)

DURAARK
DURABLE
ARCHITECTURAL
KNOWLEDGE

Fraunhofer
AUSTRIA

Challenges regarding preservation

- BIM

- Proprietary formats
- Synchronization of representations
- Inconsistent / incomplete data
- Self-sustained storage

- Point Clouds

- Lack of semantics
- Lack of structure
- Synchronization of representations
- Amount of data

DURAARK Vision: LDP for BIM and point clouds

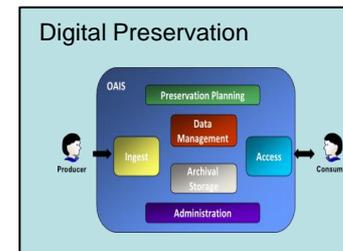

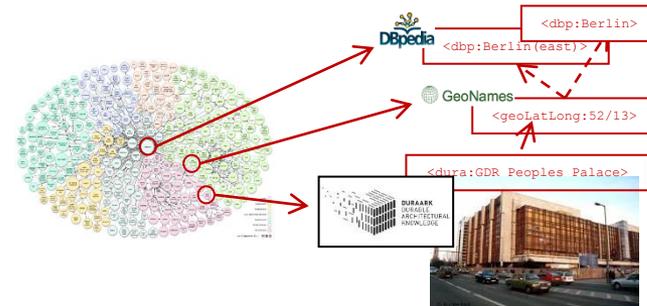

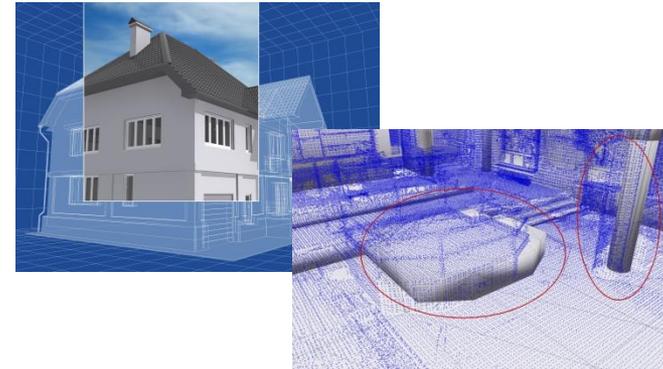

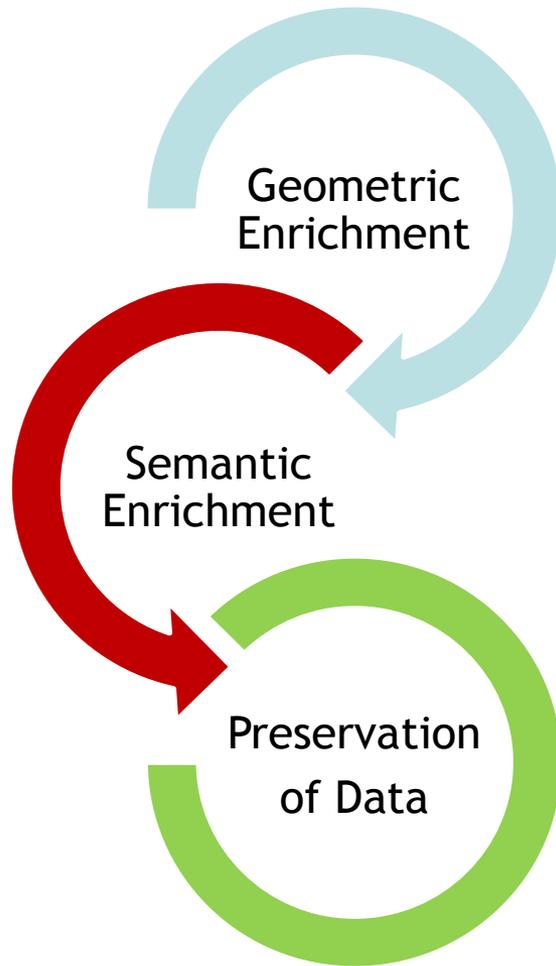

- Tools for geometric and semantic enrichment as part of the LDP framework
- Self-sustained information & knowledge databases (semantic digital archive, SDA)
- Usage of open standards and formats (e.g. OAIS, METS, PREMIS, RDF, E57, IFC)
- Implementation of a prototypical LDP platform

Find alignment

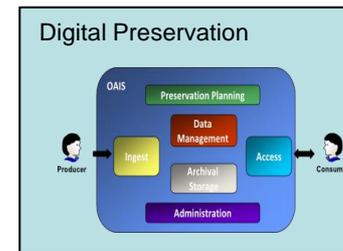

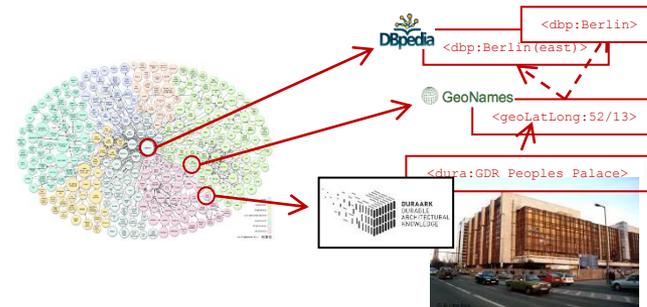

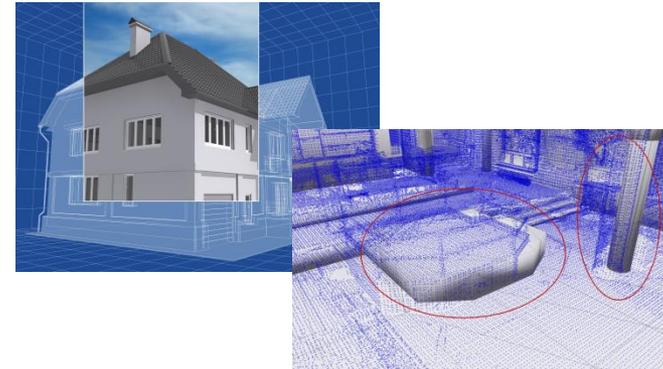

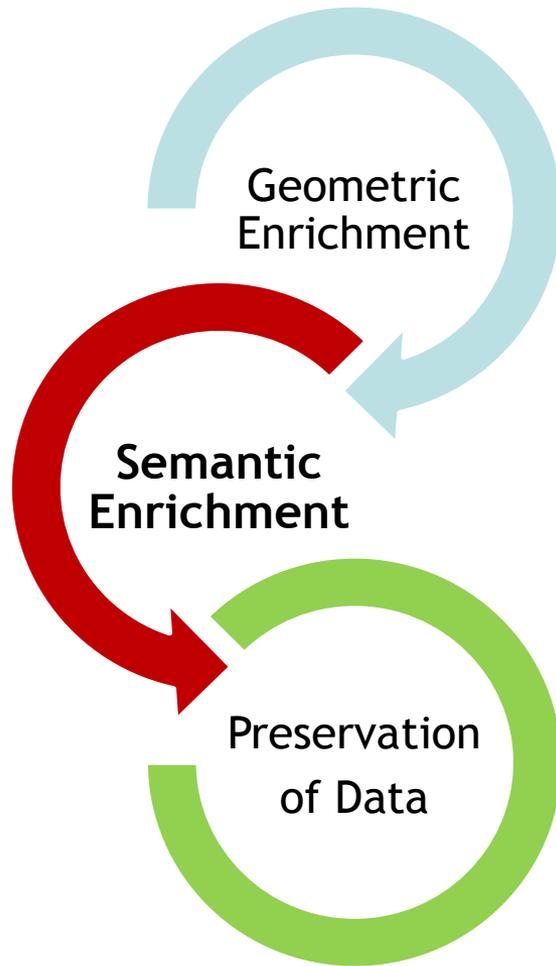

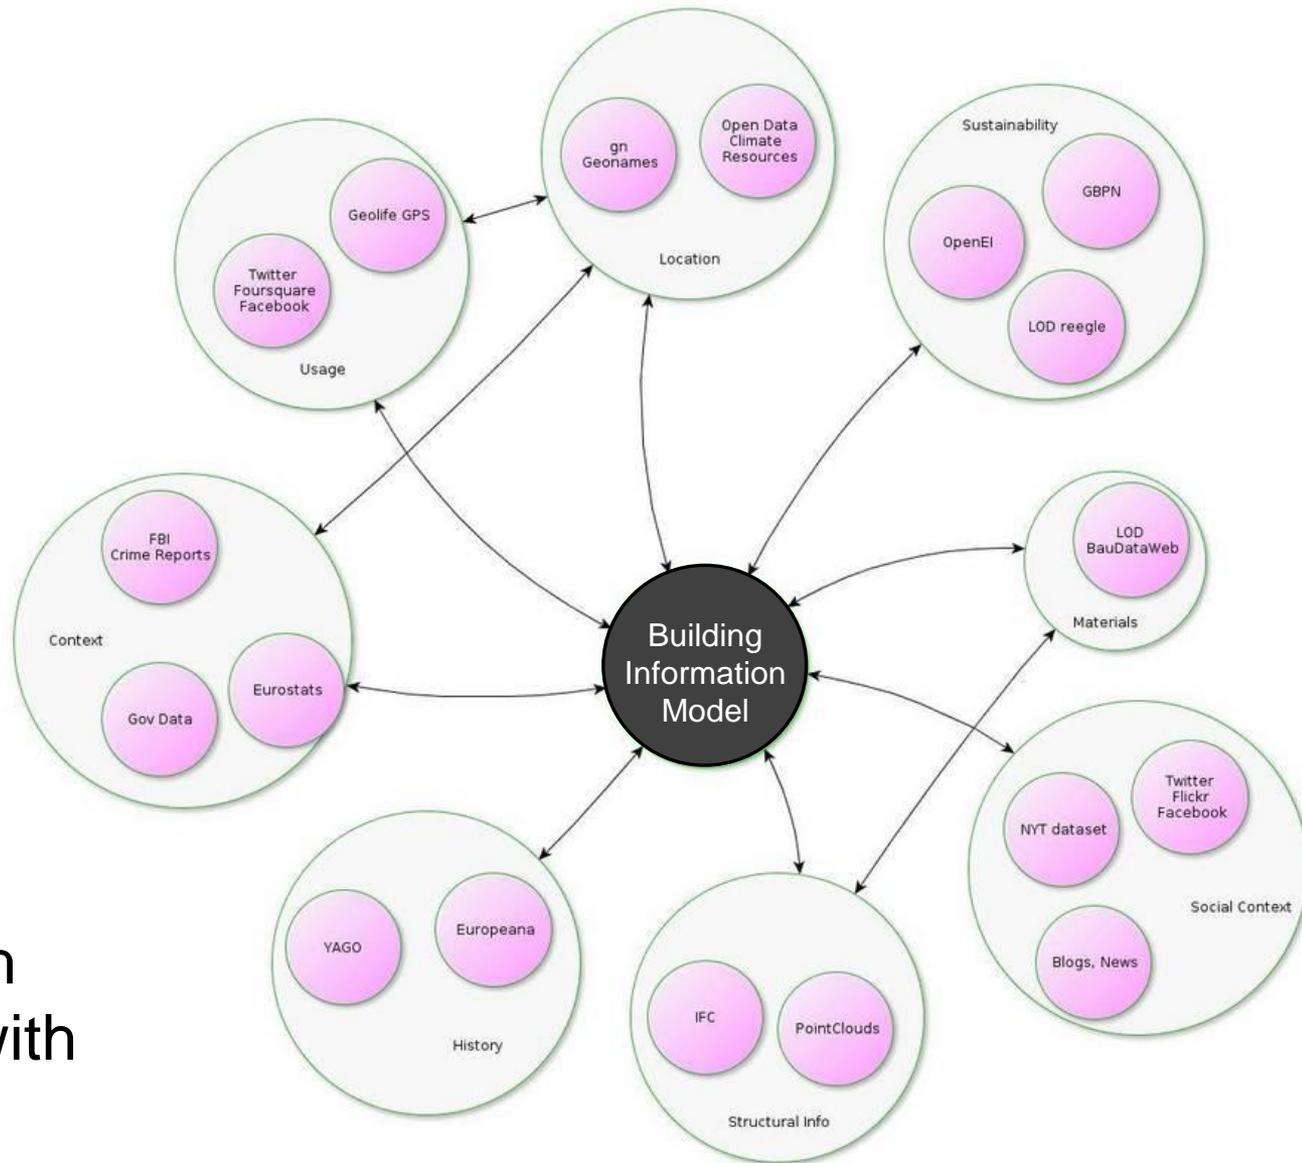

Registered (spatially aligned)
representations

Point cloud scan ("as-built")

Difference Visualization

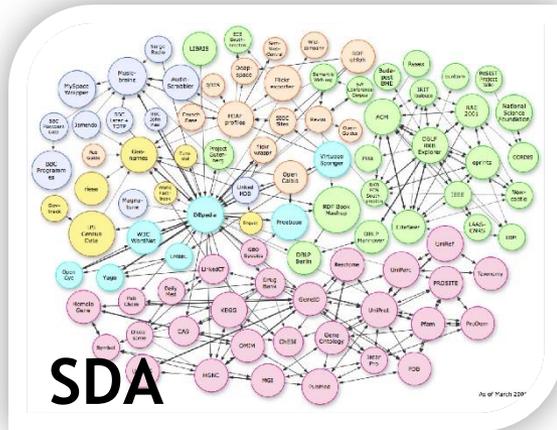

Use Case: Enrich BIM/IFC model with metadata

Maintain Semantic Digital Archive.

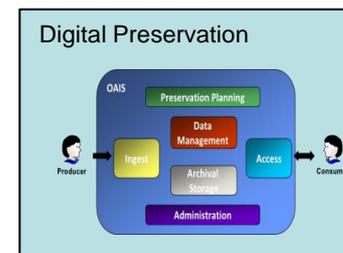

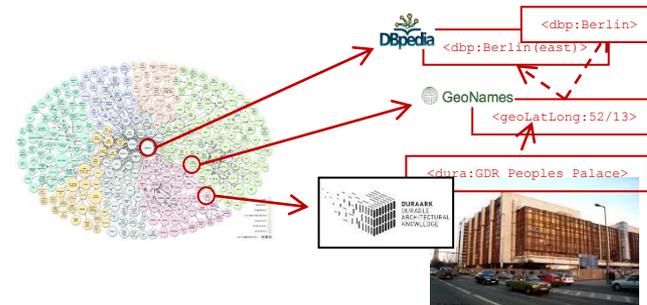

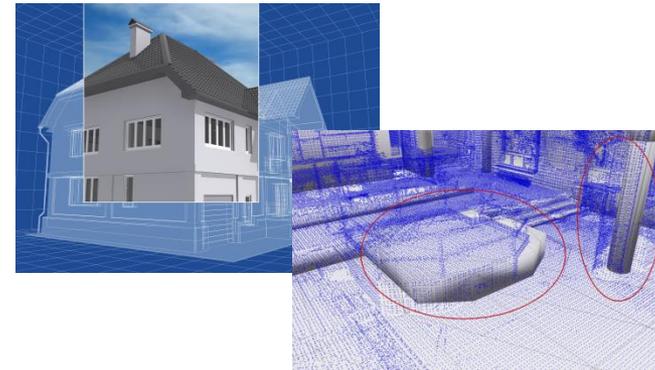

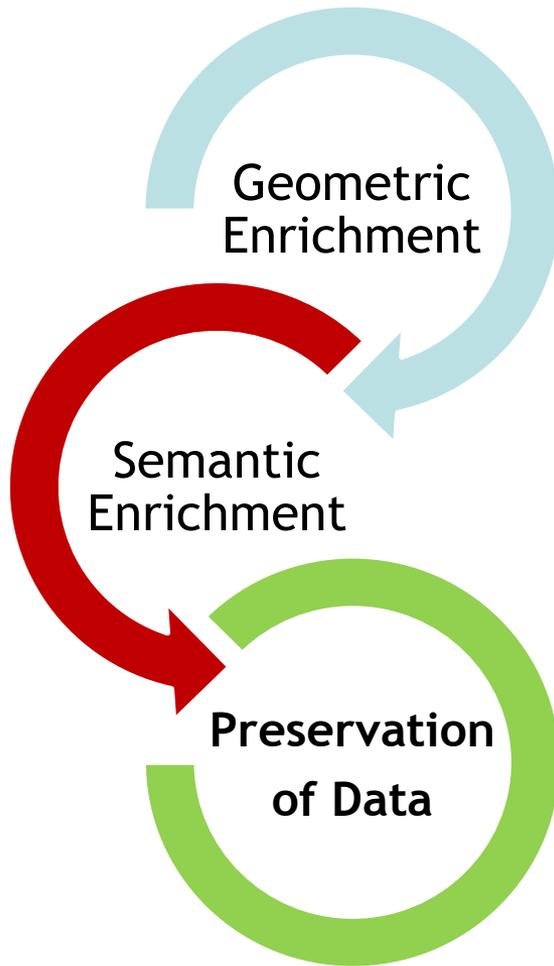

inclusion of new linked data sets

mapping into the ontological metadata framework of the concept repository

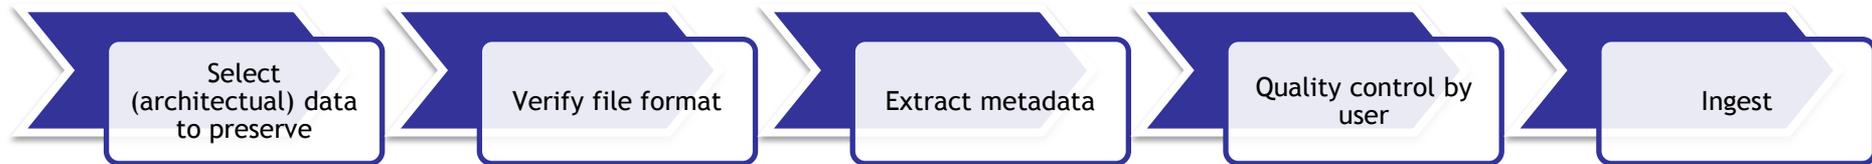

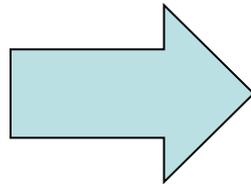

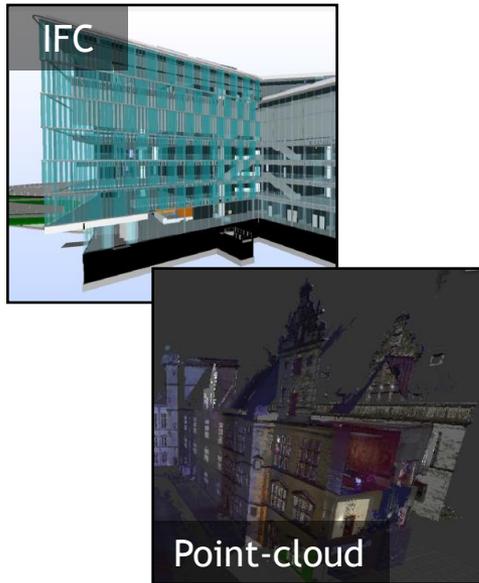

version control of linked data set mappings

creation of local snapshots of linked data sets

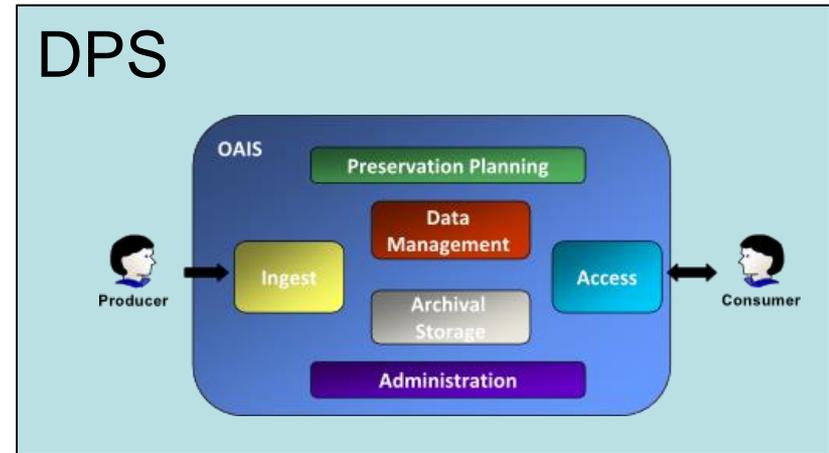

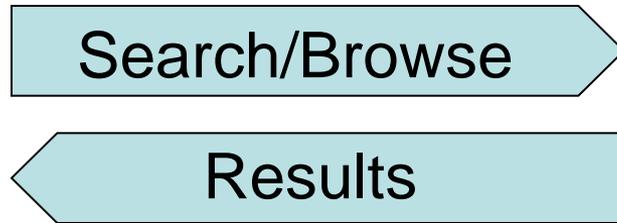

exposure of mappings for semantic enrichment of building models

Use Case: Deposit 3D architectural objects

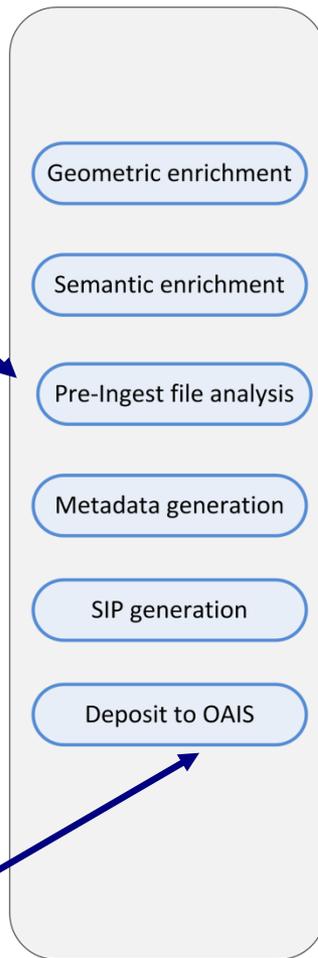

Use case: Search and retrieve archived objects

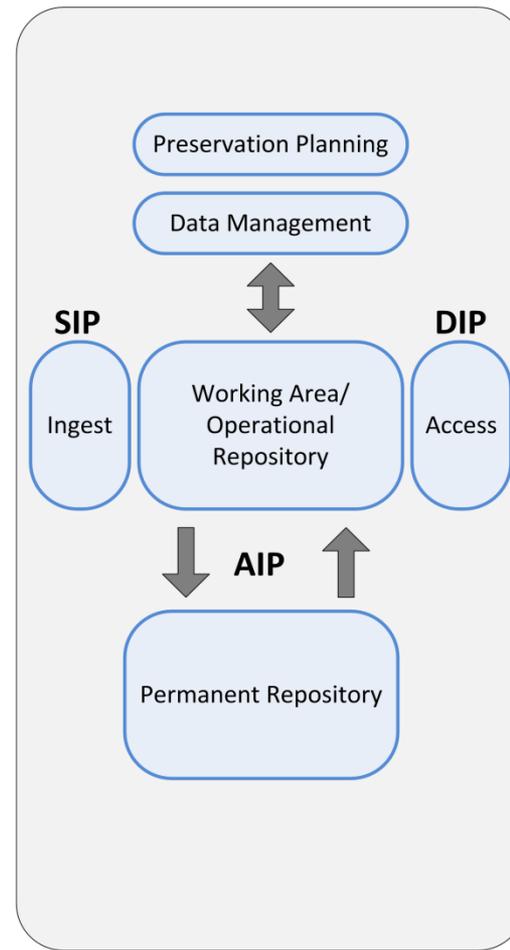

Enriching SIP with preservation metadata

Extend existing preservation Tools (DROID, Jhove)

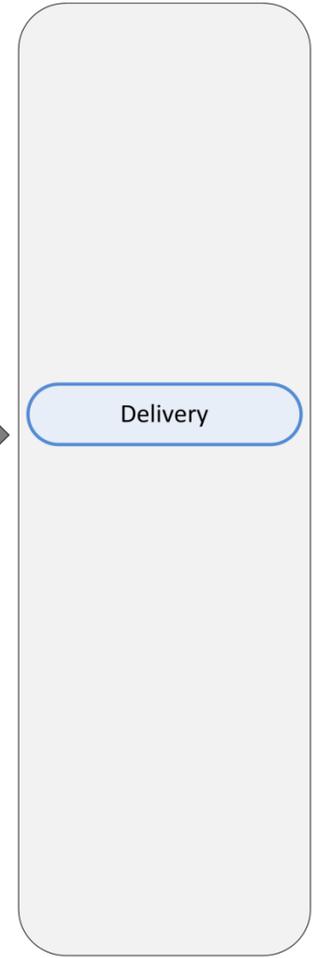

Receiving data from producer and submitting it to the OAIS compliant system

SIP →

DIP →

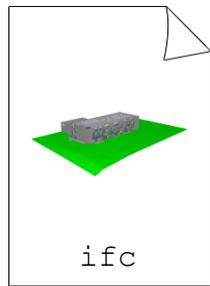

Technical Implementation

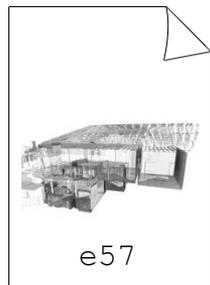

IFC and E57 metadata extraction + schema definition

Utility libraries extract metadata from IFC and point cloud files.
Metadata is stored in **buildm metadata schema**.

- creation date
- project name
- length unit
- floor count
- average room volume
- ...

- number of scans
- sensor vendor
- sensor model
- temperature
- relative humidity
- ...

Integrated Prototype

- Graphical User Interface
- Service Platform

- Comparable to popular web services like Facebook, Twitter, Youtube, Paypal, etc., which are providing services in their field
- DURAARK provides services for long-term archival of architectural data:
 - Geometric Enrichment
 - Semantic enrichment
 - Long-time Preservation of architectural data
 - Search & Retrieval of archived architectural data

Different use case scenarios for users, contributors, research groups:

- If you like the workflows provided in the Workbench UI, **setup and use** it in our company.
- You like the functionality provided by the DURAARK system and want to extend your current workflow with parts of it. You can install a set of the **provided services** and **integrate them into our existing workflow** via the exposed and documented APIs.
- You like a **specific component** of the DURAARK system and have a great idea on how to extend it. You can download the source code and **extend the component with your knowledge**. Maybe you are willing to contribute back the changes to the openly available system.
- You have a better idea on how to create a GUI for your workflow and you do not want to use the Workbench UI. You can download a set of the provided services, add a new one and **build a better user interface to the components**. Afterwards you can host the system on your company servers and **provide it as a (paid) service**.

Flexibility

How can you as a stakeholder use the system?

Stakeholders

DURAARK
DURABLE
ARCHITECTURAL
KNOWLEDGE

Fraunhofer
AUSTRIA

Core long-term preservation

- Deposit 3D architectural objects
- Search and retrieve archived objects
- Maintain Semantic Digital Archive

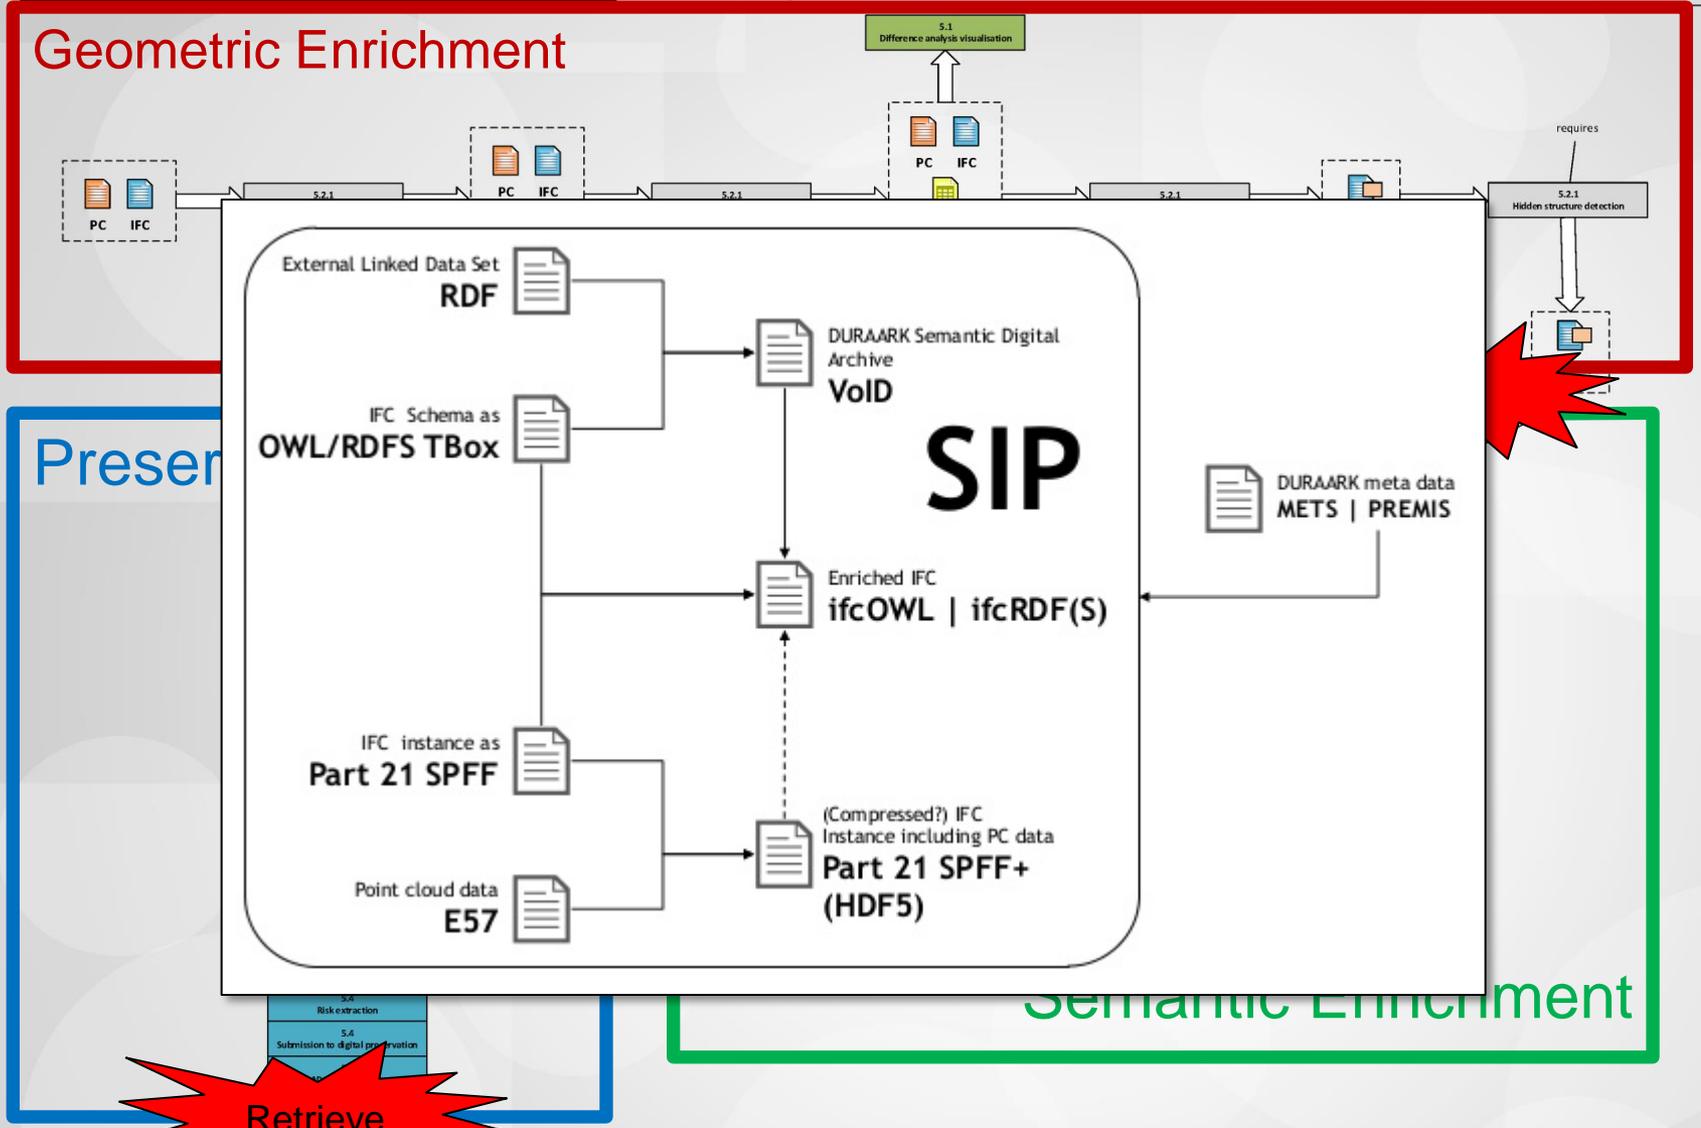

Production/Consumption

- Detect differences between planning state and as-built state
- Monitor the evolution of a structure over time
- Identify similar objects within a point-cloud scan
- Plan, document and verify retrofitting/energy renovations
- Exploit contextual information for urban planning
- Enrich BIM/IFC model with metadata from a repository

Geometric Enrichment

Preser

Semantic Enrichment
